How This Guide Maps to the Tool

This guide shows you exactly which screen to click during each stage of the TamilZorous WorkSpace Tool. Find your role below, then follow the numbered screenshots in that section — each one corresponds to a specific activity defined in the Development Policy.

Role	SDLC Phase (Policy v3.0)	Policy Reference	What This Section Shows
Business Analyst (BA)	Grooming Phase – 2 (Team Grooming)	\$6.4.2 BA Team Deliverables	Creating a Work Package — feature, scope, acceptance criteria, assignee, and Todo status
Developer	Development Phase	\$7.3 Development Workflow (Kanban → Development & Unit Testing → PR → Lead Review → Merge → Dev Validation → QA Ready)	Picking up a task, raising a GitHub PR with TZ# format, moving status, and logging time
Developer — Reopen	Development Phase (Exception Loop)	\$7.2 Core Principle / \$13.5.2 Dev Exit Criteria	Handling QA-rejected tasks: reading feedback, fixing, and resubmitting for Lead Review
QA Engineer	Testing Phase	\$8.3–8.6 Test Case Prep, Review, Execution, Reporting	Validating acceptance criteria, marking Tested or Reopen, attaching evidence, and logging time
Admin / Lead	Development Phase — PR Governance & Release Readiness	\$7.3.5 PR Review / \$12 Definition of Done	Reviewing and merging PRs, closing tasks, recording the audit trail, and logging time

Note: The screens you will use belong to TamilZorous Workspace (the project tool). The phase names and policy references above come directly from the TamilZorous Software Development — use them to understand WHY each click matter, not just HOW to make it.

ROLES & RESPONSIBILITIES:

This section defines the responsibilities of each role within the TamilZorous Workspace process. Following these guidelines ensures traceability, accountability, and smooth project execution.

1. BUSINESS ANALYST (BA)

- Create and maintain Work Packages.
- Define clear scope and business requirements.
- Write measurable Acceptance Criteria.
- Set appropriate Priority and Due Date.
- Ensure Status is set to "To Do".

DO	DO NOT
✓ Write clear and detailed descriptions.	✗ Create tasks without Acceptance Criteria.
✓ Include What, Why, and Acceptance Criteria.	✗ Assign tasks without confirming ownership.
✓ Verify business requirements before task creation.	✗ Use value descriptions such as "Fix issue".
✓ Update task details when requirements change.	✗ Change development or QA statuses.

✗ Close tasks without following workflow.

2. DEVELOPER

- Implement assigned requirements.
- Follow coding standards and architecture guidelines.
- Create GitHub Pull Requests.
- Update task statuses correctly.
- Log development effort.

DO	DO NOT
✓ Read the complete task description before coding.	✗ Start development without reading Acceptance Criteria.
✓ Set status to "In Progress" before starting work.	✗ Create PRs without linking them to the task ID.
✓ Use TZ# in PR titles.	✗ Move tasks directly to QA without review.
✓ Paste the PR link in Activity comments.	✗ Ignore review comments.
✓ Notify Lead when review is required.	
✓ Log time spent on implementation.	

3. DEVELOPER (REOPEN PROCESS)

- Analyze QA feedback.
- Fix reported issues.
- Update the existing Pull Request.
- Resubmit the task for review.

DO	DO NOT
✓ Read the entire QA comment.	✗ Ignore any QA observation.
✓ Reproduce the issue before fixing.	✗ Create a new task for the same issue.
✓ Update the same GitHub PR whenever possible.	✗ Submit partial fixes.
✓ Notify Lead and QA after fixing.	✗ Close QA comments without validation.
✓ Move task back to Lead Review.	✗ Change status directly to QA Ready without review.

4. QA ENGINEER

- Validate Acceptance Criteria.
- Execute functional testing.
- Report defects with evidence.

DO	DO NOT
✓ Read all Acceptance Criteria before testing.	✗ Mark a task as Tested without verification.
✓ Test each criterion individually.	✗ Reopen a task without providing evidence.
✓ Attach screenshots for failures.	✗ Skip Acceptance Criteria validation.
✓ Document clear reproduction steps.	✗ Approve functionality based on assumptions.

5. TEAM LEAD / ADMIN

- Review Pull Requests.
- Approve or request code changes.
- Merge approved Pull Requests.
- Close completed tasks.

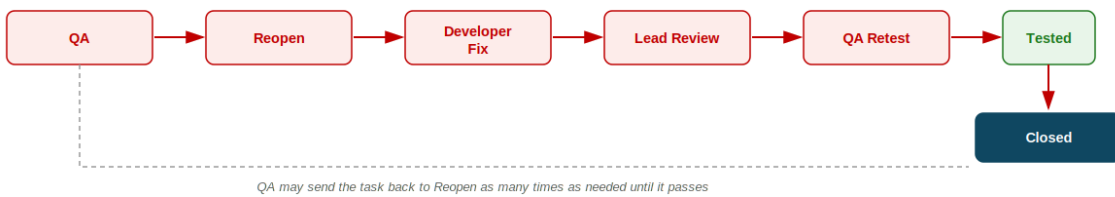

DO	DO NOT
✓ Review code quality and security.	✗ Merge unreviewed Pull Requests.
✓ Validate architecture compliance.	✗ Close tasks without merged code.
✓ Verify QA approval before merging.	✗ Skip documentation or audit updates.
✓ Add merge comments in Activity.	✗ Approve code that violates standards.
✓ Log review and merge effort.	✗ Ignore QA findings.

WORKFLOW PRINCIPLE:

Standard Flow

If QA Finds an Issue

BUSINESS ANALYST (BA)

Grooming Phase – 2 | Creating and defining a Work Package

1. Business Analyst (BA) — Create a Work Package

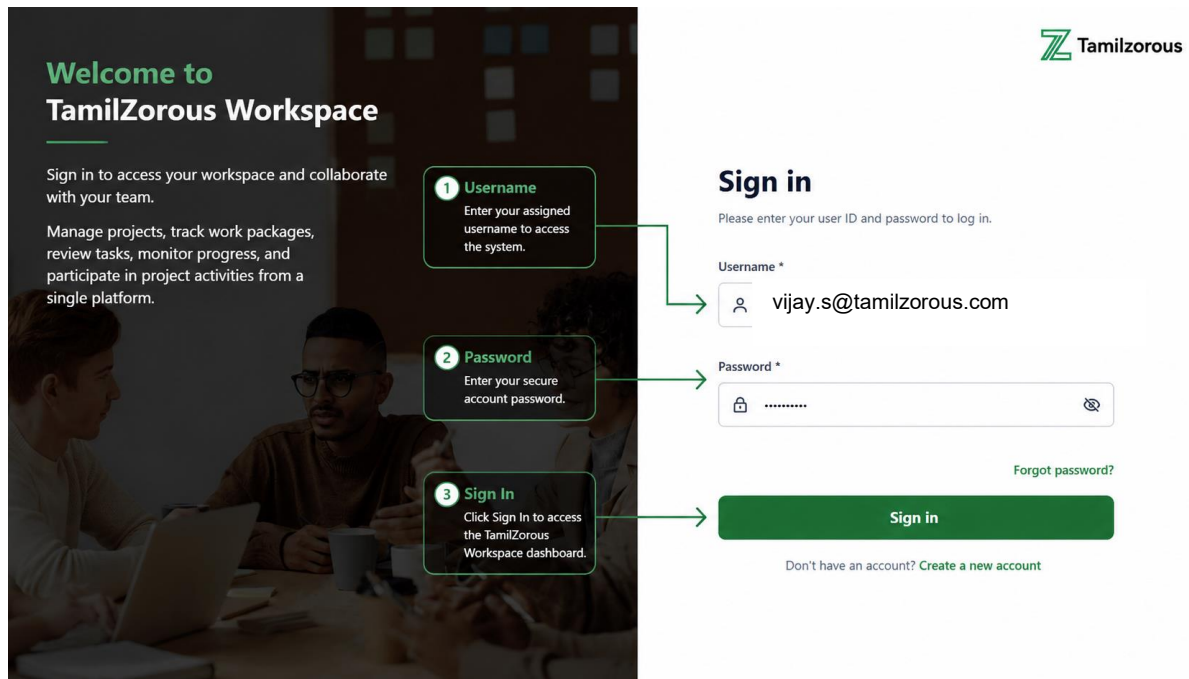

Purpose

The Business Analyst uses TamilZorous Workspace to create Work Packages that define the feature, scope, and acceptance criteria for the Development team. This screen is the starting point for all tasks in the project.

Steps to Create a Work Package

Step 1: Open TamilZorous Workspace

Open your browser and navigate to <https://workspace.tamilzorous.com>. Enter your email and password, then click Log In.

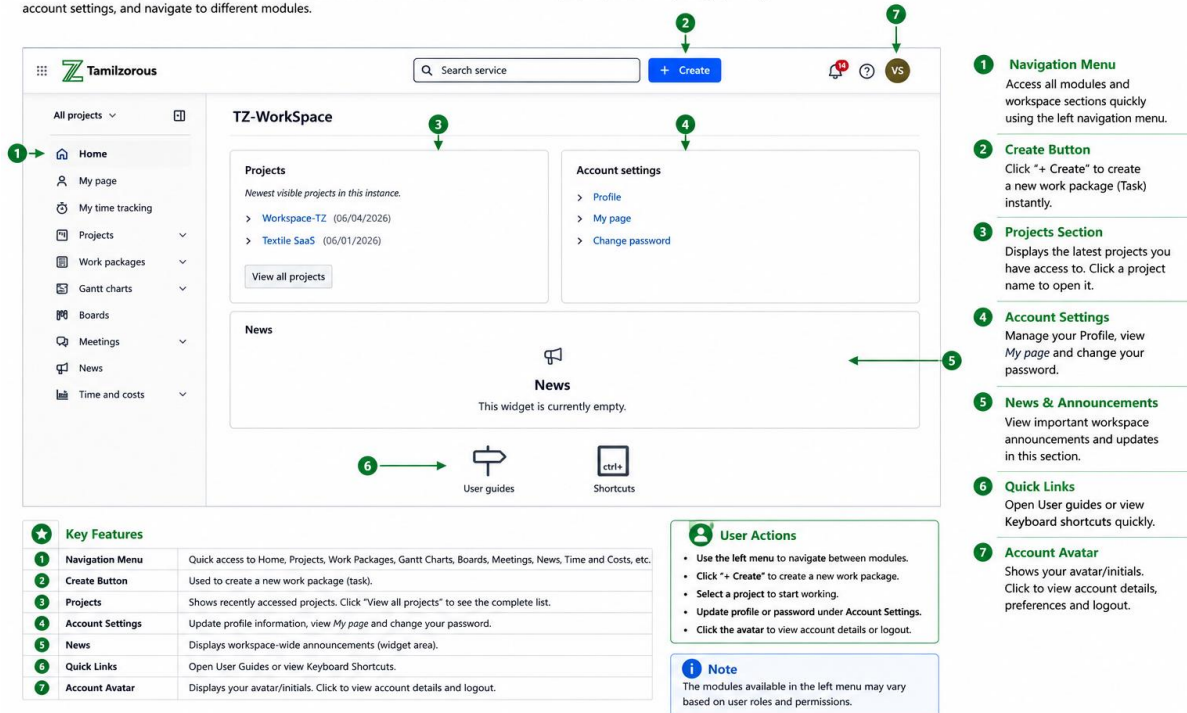

TamilZorous Workspace Login Screen

Step 2: Open Your Project

Click Projects in the left sidebar. A list of all projects will appear. Select the project you are working on.

1 TZ-WorkSpace – Main Dashboard (Home Page)

After successful login, users land on the TZ-WorkSpace Dashboard. This is the central hub to access projects, create work packages, manage account settings, and navigate to different modules.

1 → **Navigation Menu**

- Home
- My page
- My time tracking
- Projects
- Work packages
- Gantt charts
- Boards
- Meetings
- News
- Time and costs

2 → **Create Button**

3 → **Projects Section**

4 → **Account Settings**

5 → **News & Announcements**

6 → **Quick Links**

7 → **Account Avatar**

Key Features

Icon	Feature	Description
1	Navigation Menu	Quick access to Home, Projects, Work Packages, Gantt Charts, Boards, Meetings, News, Time and Costs, etc.
2	Create Button	Used to create a new work package (task).
3	Projects	Shows recently accessed projects. Click "View all projects" to see the complete list.
4	Account Settings	Update profile information, view My page and change your password.
5	News	Displays workspace-wide announcements (widget area).
6	Quick Links	Open User Guides or view Keyboard Shortcuts.
7	Account Avatar	Displays your avatar/initials. Click to view account details and logout.

User Actions

- Use the left menu to navigate between modules.
- Click "+ Create" to create a new work package.
- Select a project to start working.
- Update profile or password under Account Settings.
- Click the avatar to view account details or logout.

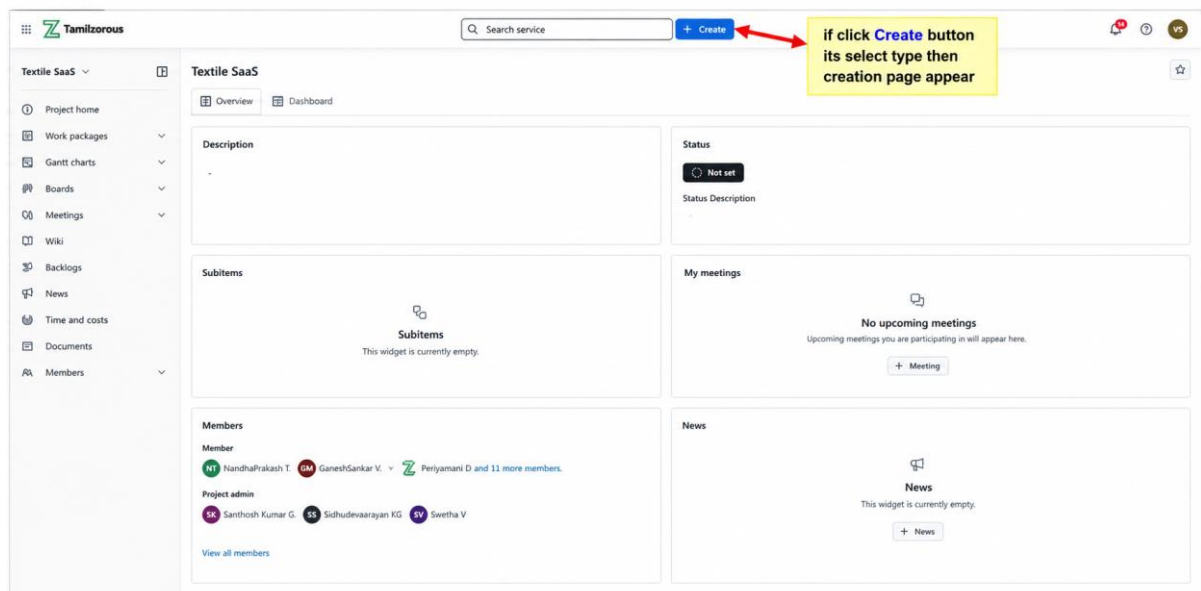

Note

The modules available in the left menu may vary based on user roles and permissions.

] Project Selection Screen

Step 3: Click + Work Package

Inside the project, click the +Create Work Package button in the top toolbar or sidebar to start creating a new task.

if click **Create** button its select type then creation page appear

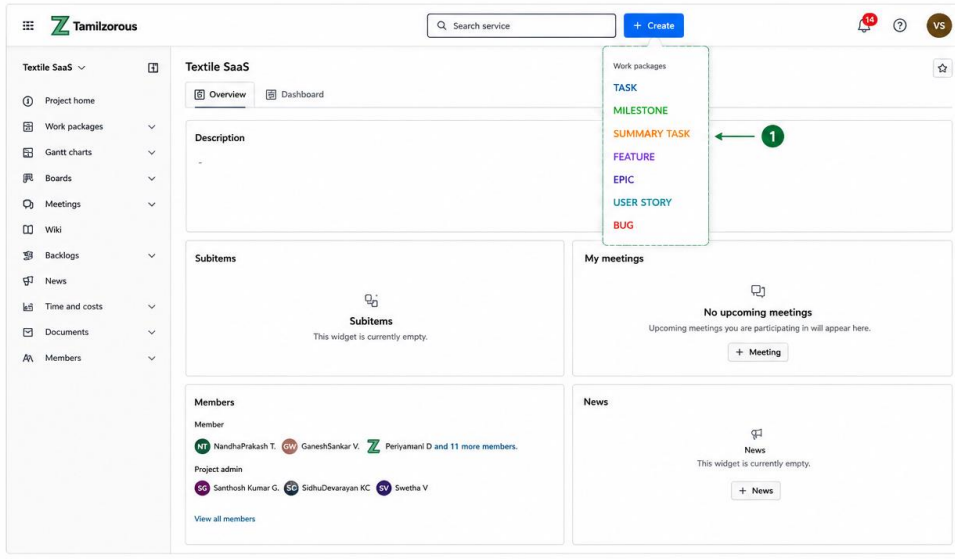

Create New Work Package

Step 4: Select the Work Package Type

A Work package dropdown will appear. Select the appropriate type — Task, Feature, User Story, or Bug — based on the requirement.

4 Select the Work Package Type

Choose Task, Feature, User Story, or Bug from the type dropdown.

1 Select Work Package Type

Click the + Create button and choose the type of work package you want to create.

Type	Description
TASK	General task or activity.
MILESTONE	Major milestone in the project.
SUMMARY TASK	Parent task to group subtasks.
FEATURE	New feature request.
EPIC	Large body of work.
USER STORY	User-focused requirement.
BUG	Defect or issue to be fixed.

Key Points

- ✓ Selecting the correct type helps in better tracking and reporting.
- ✓ You can create different types based on the nature of the work.
- ✓ Each type has its own workflow and fields.

Note
You can change the type of a work package later if required (based on permissions).

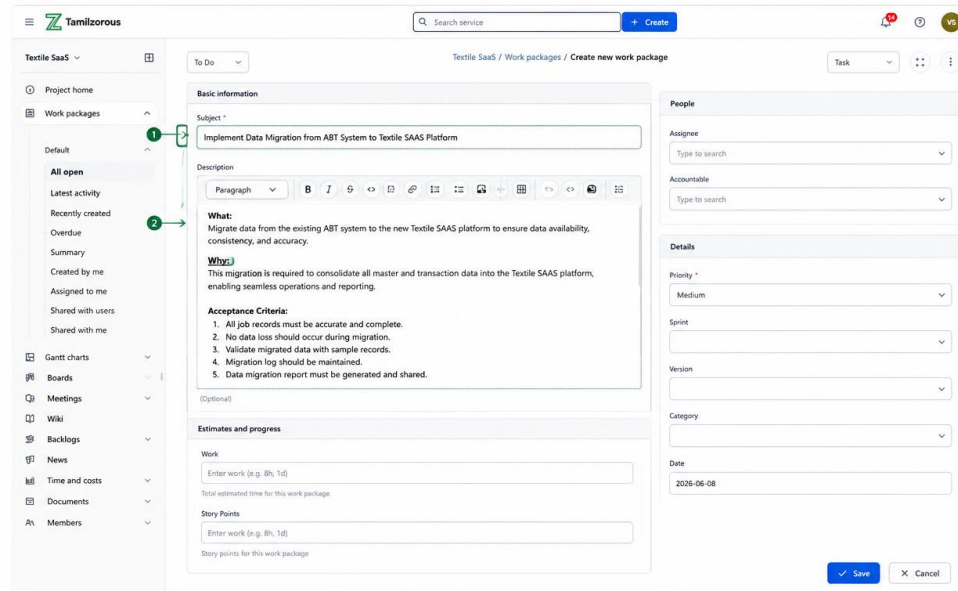

Work Package Type Selection

Step 5: Fill in Subject and Description

Enter a clear Subject (title) for the task. In the Description field, explain What needs to be done, Why it is needed, and list numbered Acceptance Criteria.

5 Fill in Subject and Description

Enter a clear Subject. In the Description field, include What, Why, and numbered Acceptance Criteria.

1 Subject

Enter a clear and concise Subject that describes the task.

2 Description

In the Description field, include the following:

- **What** – What needs to be done.
- **Why** – Why this work is required.
- **Acceptance Criteria** – List the criteria in numbered format.

Tip
A well-written description helps everyone understand the task clearly and reduces rework.

Key Points

- ✓ Always provide a meaningful Subject.
- ✓ A good Description with What, Why and Acceptance Criteria ensures clarity.
- ✓ Use numbered points for Acceptance Criteria for better tracking and validation.

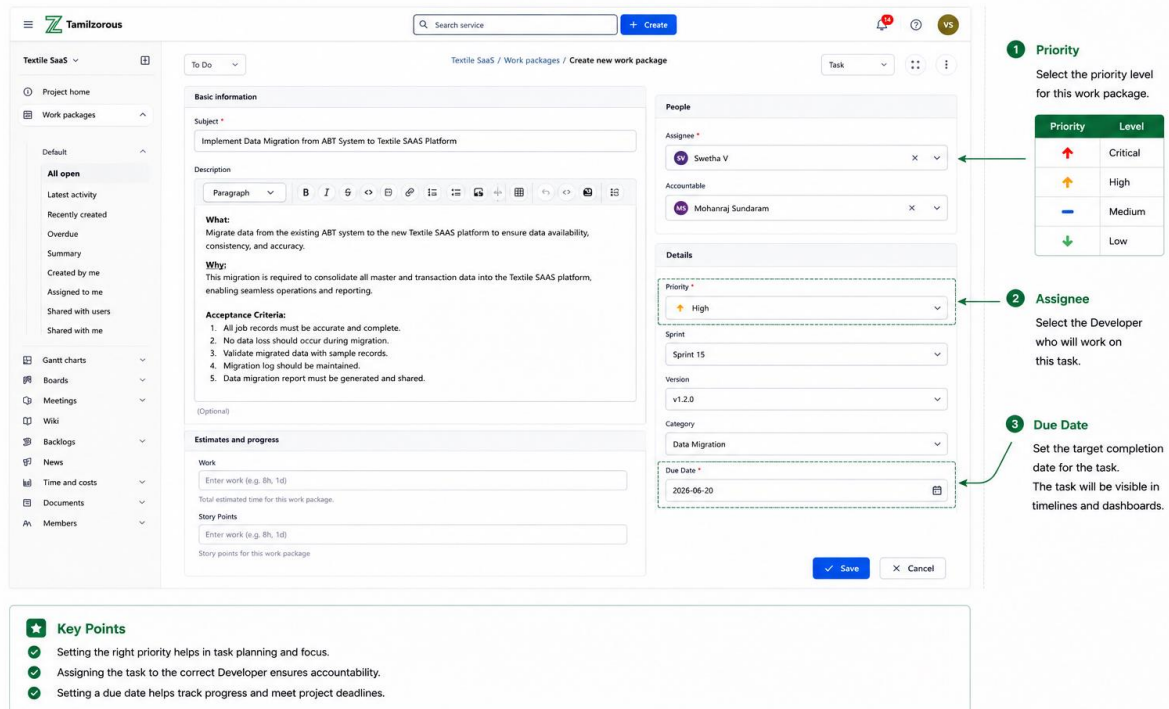

Subject and Description Entry

Step 6: Set Priority, Assignee, and Due Date

Select the Priority level (e.g., High, Normal, Low). Assign the Developer who will work on this task. Enter the Due Date.

6 Set Priority, Assignee, and Due Date

Select the Priority level, assign the Developer responsible, and set a Due Date.

The screenshot shows the 'Create new work package' form in the Tamilzorous application. The form is titled 'Textile SaaS / Work packages / Create new work package'. It includes a sidebar with navigation options like 'Project home', 'Work packages', 'Gantt charts', 'Boards', 'Meetings', 'Wiki', 'Backlogs', 'News', 'Time and costs', 'Documents', and 'Members'. The main form area is divided into sections: 'Basic information', 'People', 'Details', and 'Estimates and progress'. The 'Basic information' section contains fields for 'Subject' (Implement Data Migration from ABT System to Textile SAAS Platform), 'Description' (with a rich text editor), 'What:' (Migrate data from the existing ABT system to the new Textile SAAS platform to ensure data availability, consistency, and accuracy), 'Why:' (This migration is required to consolidate all master and transaction data into the Textile SAAS platform, enabling seamless operations and reporting), and 'Acceptance Criteria:' (a list of 5 criteria). The 'People' section has 'Assignee' (Sweetha V) and 'Accountable' (Mohanraj Sundaram). The 'Details' section includes 'Priority' (High), 'Sprint' (Sprint 15), 'Version' (v1.2.0), 'Category' (Data Migration), and 'Due Date' (2026-06-20). The 'Estimates and progress' section has fields for 'Work' and 'Story Points'. Annotations on the right side of the form indicate the steps for setting priority, assignee, and due date. A 'Key Points' section at the bottom provides additional guidance.

1 Priority
Select the priority level for this work package.

Priority	Level
↑	Critical
↑	High
→	Medium
↓	Low

2 Assignee
Select the Developer who will work on this task.

3 Due Date
Set the target completion date for the task.
The task will be visible in timelines and dashboards.

Key Points

- Setting the right priority helps in task planning and focus.
- Assigning the task to the correct Developer ensures accountability.
- Setting a due date helps track progress and meet project deadlines.

Priority, Assignee and Due Date

Step 7: Set Status to Todo and Save

Set the Status field to Todo. Click Save to create the Work Package. The task is now visible to the assigned Developer.

7 Set Status to To Do and Save

Ensure the **Status** is set to **To Do**, then click **Save**. The task is now visible to the Developer.

1 Set Status to To Do

Select To Do from the Status dropdown.

2 Click Save

Click Save to create the work package.

Key Points

- To Do is the initial status indicating the task is ready to be worked on.
- Saving the task will make it visible in Work Packages.
- The assigned Developer can start working on it.

Save Work Package — Status: Todo

Note: The Developer will see this task when they filter Work Packages using Assignee = Me in the Work Packages view.

DEVELOPER

Development Phase | Kanban → Coding → Unit Testing → PR → Merge → QA Ready

2. Developer — Task & PR Workflow

Purpose

The Developer picks up assigned tasks from TamilZorous Workspace, implements the feature, raises a GitHub Pull Request linked to the task, and moves the status through the workflow until the task is QA Ready.

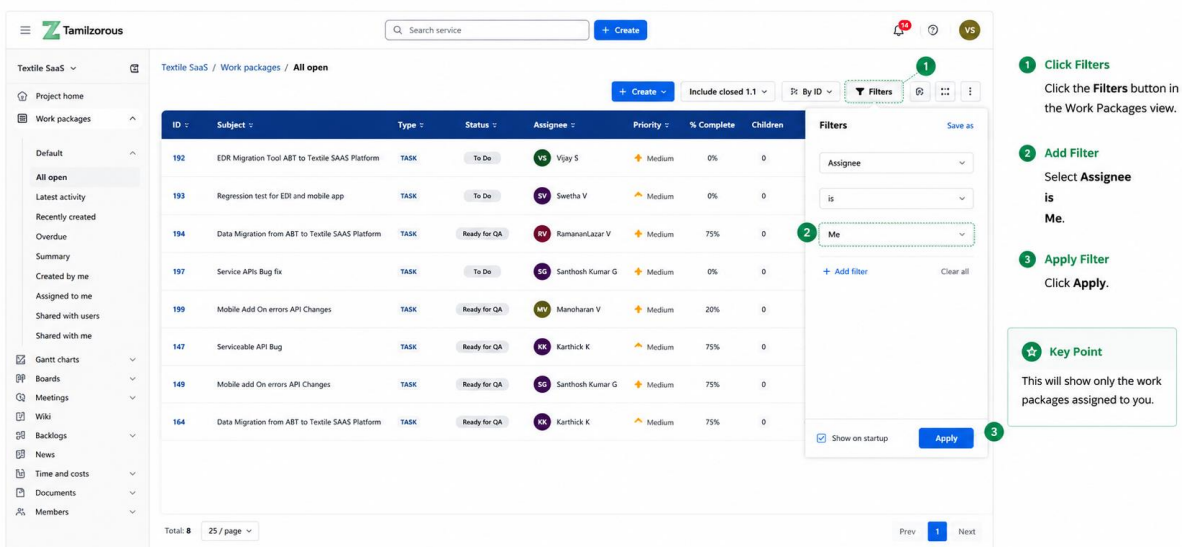

Steps to Pick Up and Complete a Task

Step 1: Filter Work Packages by Assignee = Me

Open the Work Packages view. Click Filters, then add the filter Assignee = Me. This shows only the tasks assigned to you.

8 Filter Work Packages by Assignee = Me

In the Work Packages view, click **Filters** and add **Assignee = Me** to see only your tasks.

The screenshot shows the TamilZorous interface with the 'Work packages' view selected. A table lists tasks with columns for ID, Subject, Type, Status, Assignee, Priority, % Complete, and Children. A 'Filters' panel is open on the right, showing a filter for 'Assignee' set to 'Me'. Numbered callouts 1, 2, and 3 indicate the steps: 1. Click Filters, 2. Add Filter (Assignee is Me), 3. Apply Filter. A 'Key Point' box states: 'This will show only the work packages assigned to you.'

ID	Subject	Type	Status	Assignee	Priority	% Complete	Children
192	EDR Migration Tool ABT to Textile SAAS Platform	TASK	To Do	Vijay S	Medium	0%	0
193	Regression test for EDR and mobile app	TASK	To Do	Swetha V	Medium	0%	0
194	Data Migration from ABT to Textile SAAS Platform	TASK	Ready for QA	RamanLazar V	Medium	75%	0
197	Service APIs Bug fix	TASK	To Do	Santhosh Kumar G	Medium	0%	0
199	Mobile Add On errors API Changes	TASK	Ready for QA	Manoharan V	Medium	20%	0
147	Serviceable API Bug	TASK	Ready for QA	Karthick K	Medium	75%	0
149	Mobile add On errors API Changes	TASK	Ready for QA	Santhosh Kumar G	Medium	75%	0
164	Data Migration from ABT to Textile SAAS Platform	TASK	Ready for QA	Karthick K	Medium	75%	0

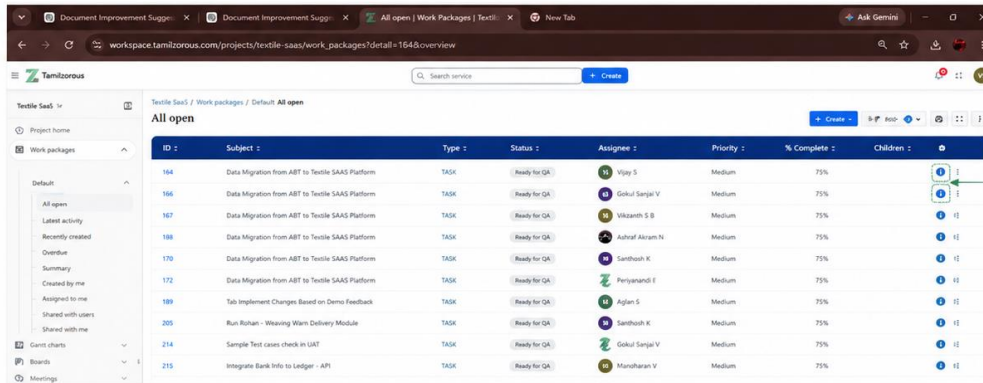

Work Packages Filtered by Assignee

Step 2: Open the Task and Read Description

Click the task title to open it. Read the full Description and every Acceptance Criterion listed before writing any code.

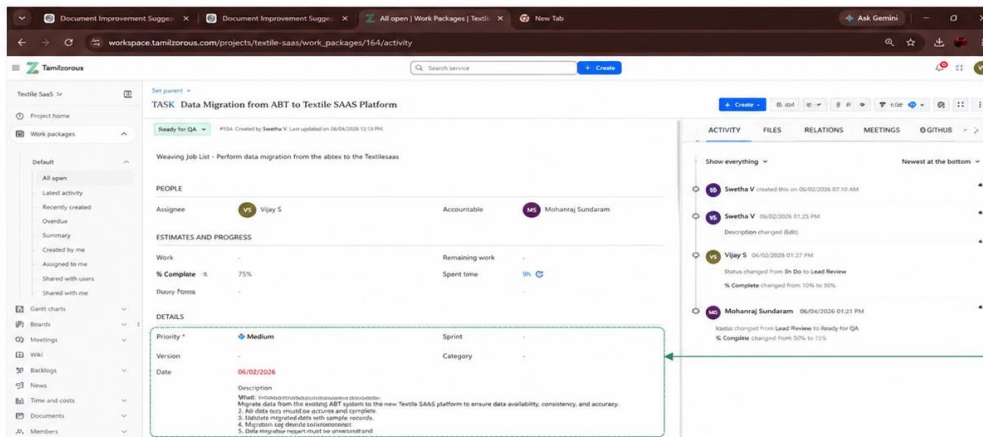

2 Open the Task using btn and Read Description

Click the  (info) button of the task to open it. Read the Description and all Acceptance Criteria before starting any work.

1 Click the  Button

Click the  (info) button of the task you want to open.

2 Read Description & Acceptance Criteria

Read the Description carefully.

Review all Acceptance Criteria (numbered list) before starting any work.

Task Detail View

Step 3: Set Status to In Progress

Click the Status field on the task and select In Progress. Do this immediately when you start work so the team can see the current state.

Status changed from Ready for QA to In Progress

Add a comment. Type @ to notify people.

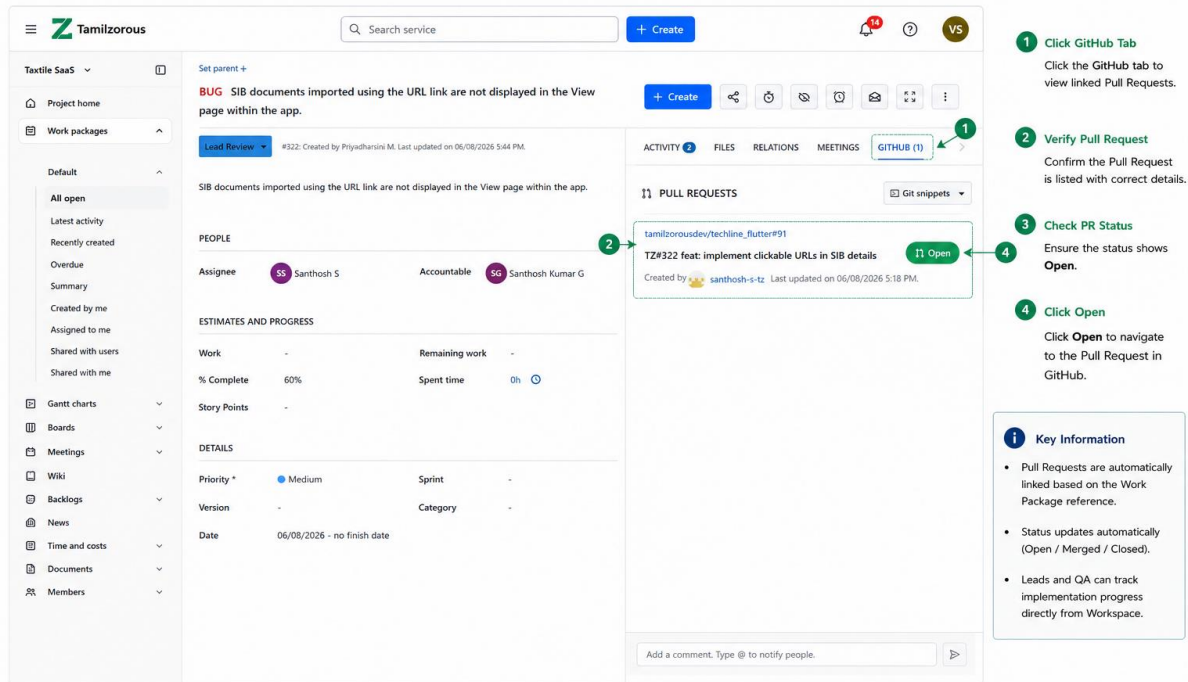

Status Changed to In Progress

Step 4: Raise a GitHub PR with TZ# in the Title & Verify PR Appears in Workspace GitHub Tab

On GitHub, create a Pull Request for your branch. The PR title must include TZ# followed by the task number — for example: TZ#46 - Fix login page validation.

10 Verify PR Appears in Workspace GitHub Tab

Return to the task. Within ~60 seconds, click the GitHub tab to confirm the Pull Request is linked.

1 Click GitHub Tab
Click the GitHub tab to view linked Pull Requests.

2 Verify Pull Request
Confirm the Pull Request is listed with correct details.

3 Check PR Status
Ensure the status shows **Open**.

4 Click Open
Click **Open** to navigate to the Pull Request in GitHub.

Key Information

- Pull Requests are automatically linked based on the Work Package reference.
- Status updates automatically (Open / Merged / Closed).
- Leads and QA can track implementation progress directly from Workspace.

GitHub PR Created with TZ# Reference

Note: Use only TZ# format. Other formats such as [#46] or #46 alone will not link to the workspace.

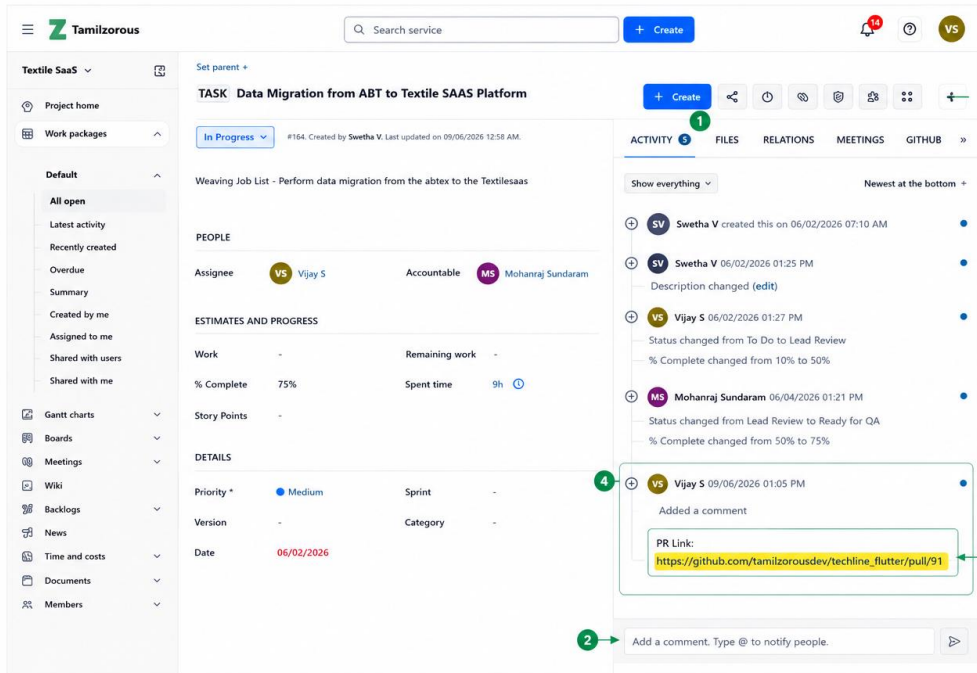

PR Linked in Workspace GitHub Tab

Step 5: Paste PR Link in Activity Comment

Click the Activity tab on the task. Add a comment with the GitHub PR link so the Lead can access it directly.

11 Paste PR Link in Activity Comment

Click the Activity tab. Add a comment pasting the GitHub PR URL so the Lead can find it quickly.

- Click Activity Tab**
Click the Activity tab to open the activity feed.
- Add Comment**
Scroll to the bottom and add a new comment.
- Paste PR Link**
Paste the GitHub Pull Request URL in the comment.
- Comment Added**
The PR link is now visible in the activity for the Lead and team.

Key Information

- Adding the PR link helps the Lead review the code quickly.
- All team members can view the comment in Activity.

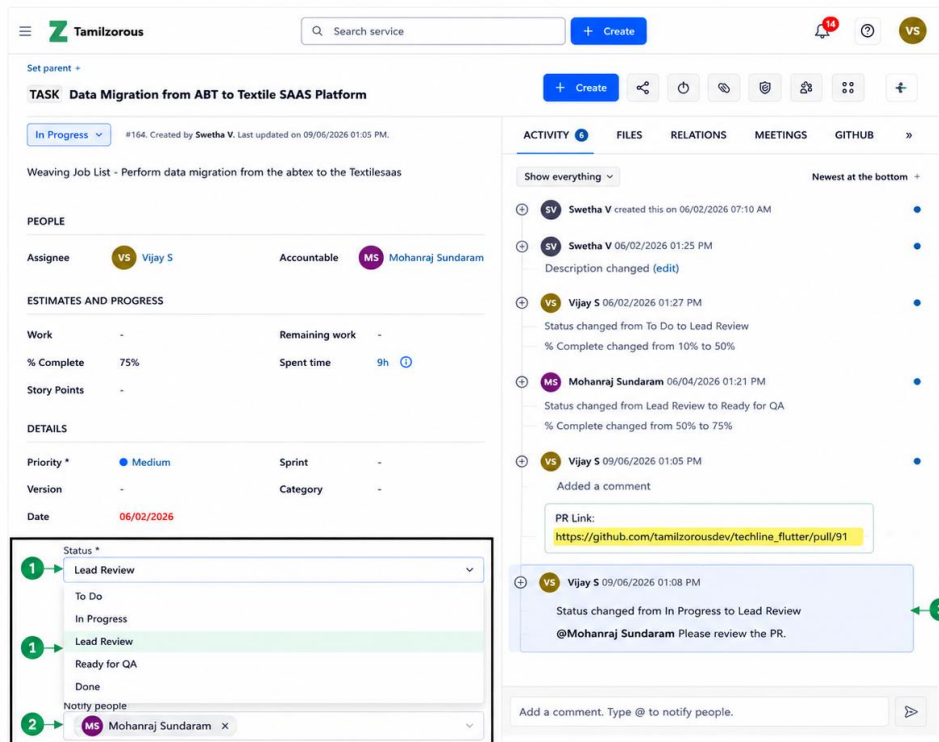

PR Link Posted in Activity

Step 6: Set Status to Lead Review

Change the Status field to Lead Review. Use @mention in the Activity tab to notify the Team Lead.

12 Set Status to Lead Review

Update the Status field to **Lead Review** and @mention the Lead to notify them.

- Update Status**
Click the Status field and select **Lead Review**.
- @Mention Lead**
Type @ and select the Lead to notify them.
- Status Updated**
Activity shows status changed to **Lead Review** and Lead is notified.

Key Information

- Setting status to Lead Review informs the Lead that the task is ready for their review.
- @Mentioning the Lead sends a notification in Activity and via email.
- Lead can now review the implementation and provide feedback.

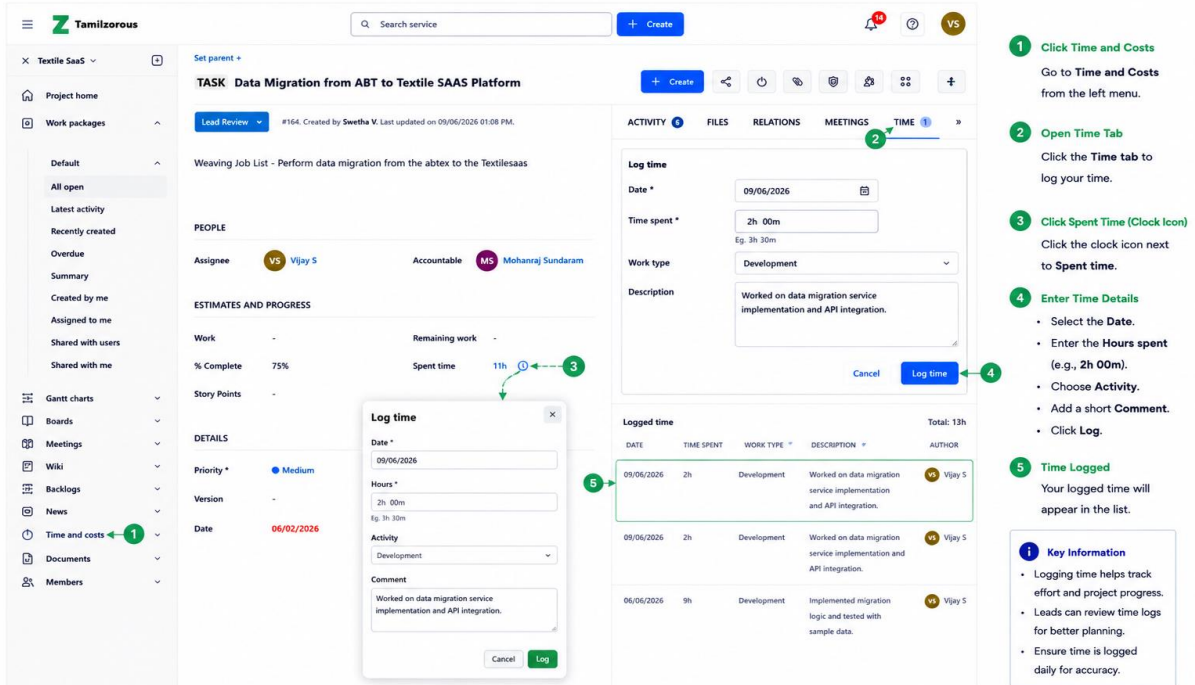

Status Set to Lead Review

Step 7: Log Time Spent in the Time Tab

Click the Time tab on the Work Package. Enter the number of hours spent on this task and save the entry.

7 Log Time Spent in the Time Tab

Click the **Time** tab on the work package and log the hours spent on this task.

1 Click Time and Costs
Go to **Time and Costs** from the left menu.

2 Open Time Tab
Click the **Time** tab to log your time.

3 Click Spent Time (Clock Icon)
Click the clock icon next to **Spent time**.

4 Enter Time Details

- Select the **Date**.
- Enter the **Hours spent** (e.g., 2h 00m).
- Choose **Activity**.
- Add a short **Comment**.
- Click **Log**.

5 Time Logged
Your logged time will appear in the list.

Key Information

- Logging time helps track effort and project progress.
- Leads can review time logs for better planning.
- Ensure time is logged daily for accuracy.

Time Logged in Work Package

Note: Log time before you change the status to Lead Review. This ensures your hours are recorded for every task.

DEVELOPER — REOPEN

Development Phase | Handling a QA Rejection and Resubmitting

3. Developer — Handling a Reopen

Purpose

When QA finds that a task does not meet the acceptance criteria, they set the status to Reopen and leave a detailed comment. The Developer must read the comment carefully, fix the issue, and resubmit the task for review.

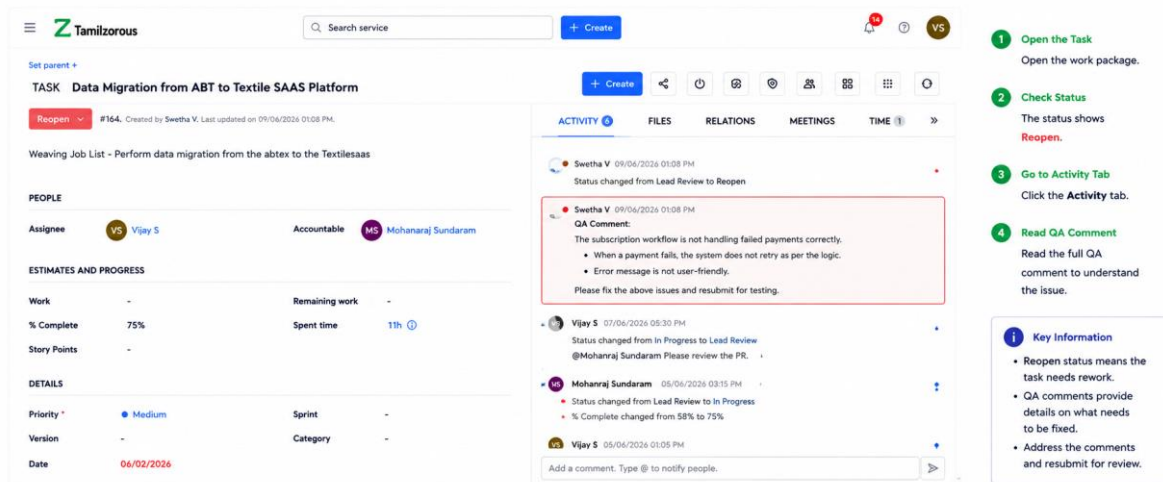

Steps to Handle a Reopen

Step 1: Read the QA Comment in the Activity Tab

Open the task. You will see the status is now Reopen. Click the Activity tab and read the full QA comment — it will describe what failed, the steps to reproduce, and the expected behaviour.

8 Task Status Shows Reopen — Read the QA Comment

Open the task. The status shows Reopen. Go to the Activity tab and read the full QA comment.

1 Open the Task
Open the work package.

2 Check Status
The status shows **Reopen**.

3 Go to Activity Tab
Click the **Activity** tab.

4 Read QA Comment
Read the full QA comment to understand the issue.

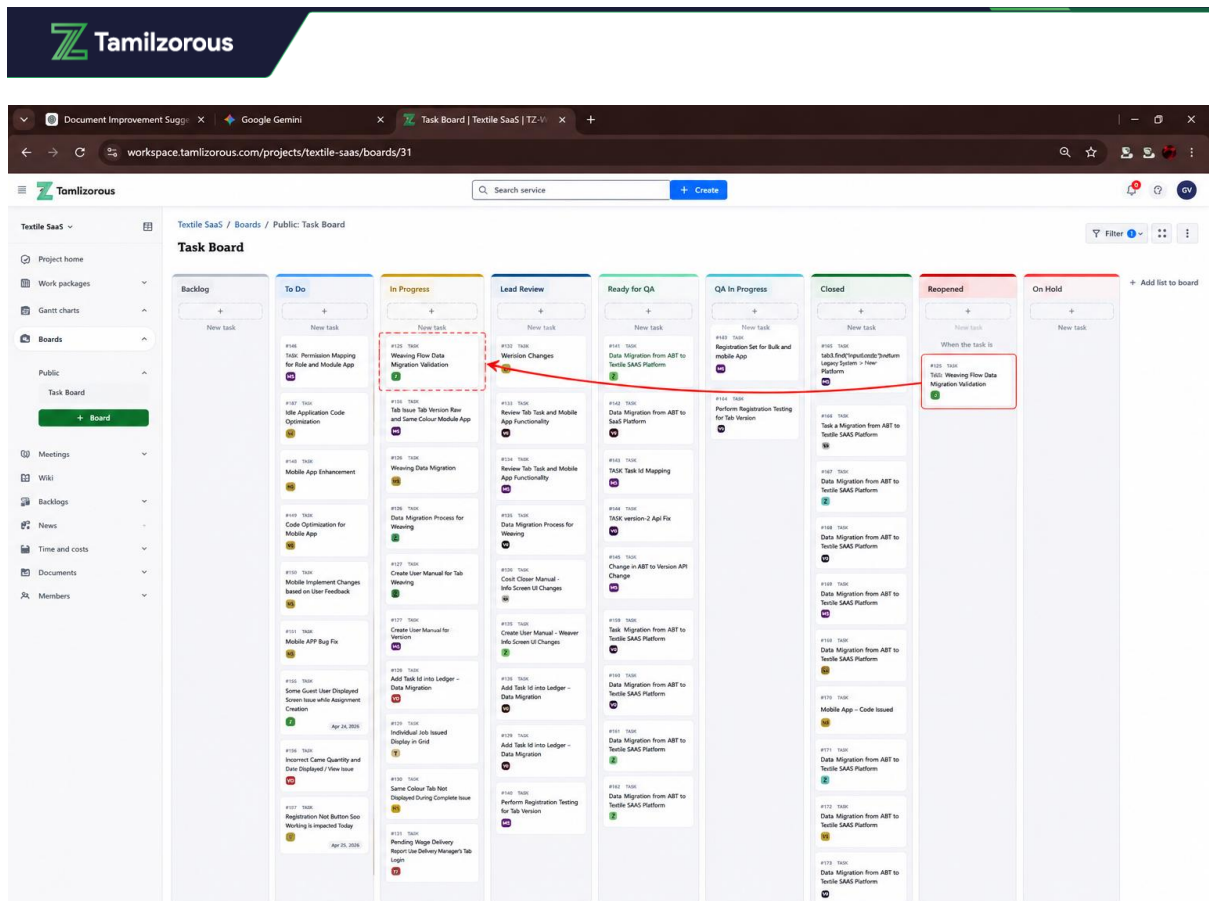

Key Information

- Reopen status means the task needs rework.
- QA comments provide details on what needs to be fixed.
- Address the comments and resubmit for review.

Reopen Status — QA Comment in Activity Tab

Step 2: Set Status Back to In Progress

Before making any code changes, click the Status field and select In Progress. This tells the team you have started working on the fix.

Status Reset to In Progress

Step 3: Fix the Issue and Push to GitHub

Address every item listed in the QA comment. Once fixed, push the updated code to the same branch on GitHub. The existing PR will automatically show the new commits.

Step 4: Set Status to Lead Review and Notify

Change the Status to Lead Review. In the Activity tab, @mention the Lead and QA Engineer to let them know the fix is ready for re-review.

Status Set to Lead Review — Team Notified

Note: Always read the full QA comment before touching any code. Address every point listed — partial fixes will result in another Reopen.

QA ENGINEER

Testing Phase | Test Execution → Defect Logging → Reporting

4. QA Engineer — Test a Feature

Purpose

The QA Engineer tests features once they reach Ready For QA status. The QA Engineer validates each acceptance criterion, records the result in the workspace, attaches evidence if the test fails, and logs time spent on testing.

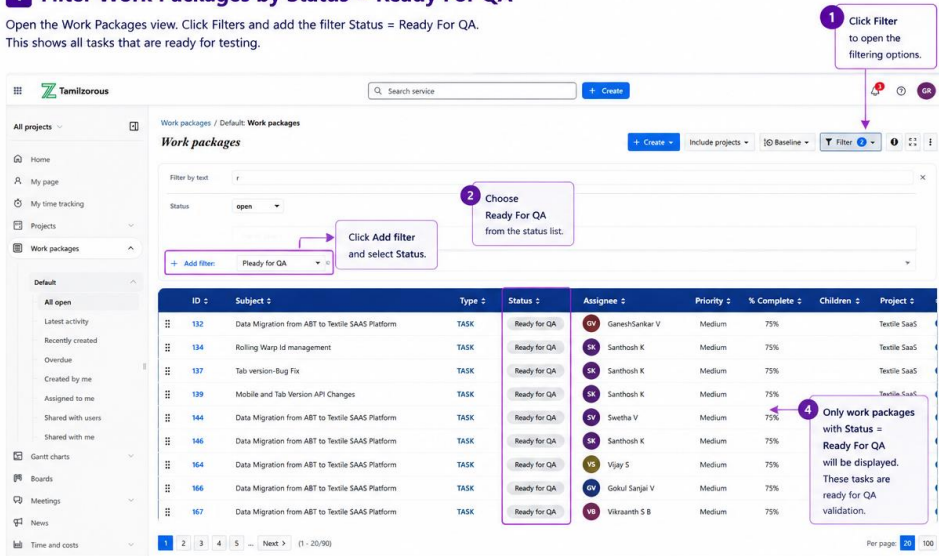

Steps to Test a Feature

Step 1: Filter Work Packages by Status = Ready For QA

Open the Work Packages view. Click Filters and add the filter Status = Ready For QA. This shows all tasks that are ready for testing.

1 Filter Work Packages by Status = Ready For QA

Open the Work Packages view. Click Filters and add the filter Status = Ready For QA. This shows all tasks that are ready for testing.

1 Click Filter to open the filtering options.

2 Choose Ready For QA from the status list.

3 Click Add filter and select Status.

4 Only work packages with Status = Ready For QA will be displayed. These tasks are ready for QA validation.

Key Information

- Filter by Status = Ready For QA
- Displays only tasks awaiting QA testing
- Review Acceptance Criteria before testing
- Verify linked GitHub PR before execution
- Record PASS or FAIL results after testing

Expected Result

The Work Packages list displays only tasks that are ready for QA testing.

Related Roles

- QA Engineer
- Lead / Admin
- Developer (Reference)
- Business Analyst (Reference)

Screenshot 1: Work Packages Filtered by Status = Ready For QA

STEPS

- 1 Open Filters**
Click the Filter button in the top toolbar.
- 2 Add Filter**
Click Add filter and select Status.
- 3 Select Status**
Choose Ready For QA from the dropdown list.
- 4 View Results**
The list now shows only tasks with Status = Ready For QA.

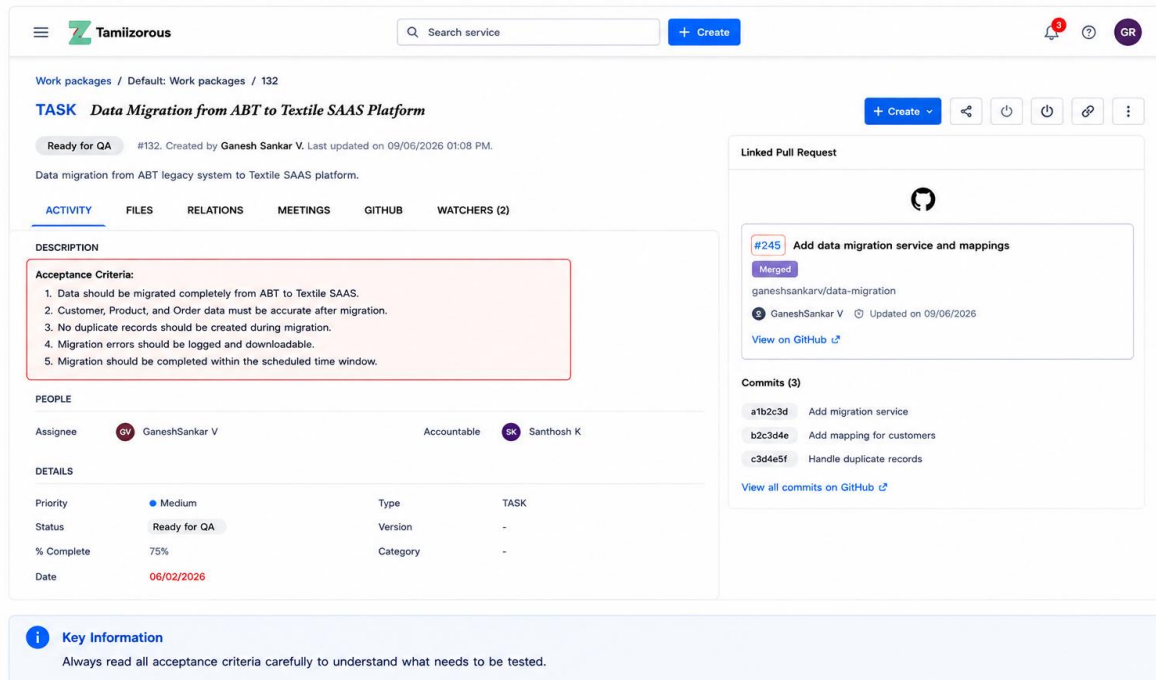

Work Packages Filtered by Ready For QA

Step 2: Open the Task and Read Acceptance Criteria

Click the task title to open it. Read every acceptance criterion listed in the Description section before opening the application.

1 Open Task and Read Acceptance Criteria

Open the task. Read every acceptance criterion in the Description before opening the application.

Task: Data Migration from ABT to Textile SAAS Platform

Ready for QA #132. Created by Ganesh Sankar V. Last updated on 09/06/2026 01:08 PM.

Data migration from ABT legacy system to Textile SAAS platform.

DESCRIPTION

Acceptance Criteria:

1. Data should be migrated completely from ABT to Textile SAAS.
2. Customer, Product, and Order data must be accurate after migration.
3. No duplicate records should be created during migration.
4. Migration errors should be logged and downloadable.
5. Migration should be completed within the scheduled time window.

PR is Linked

A valid Pull Request is linked to this task.

No PR Found?

If no PR is shown in the GitHub tab, notify the Developer before testing.

Key Information

- Always check the GitHub tab before testing.
- Ensure the PR is linked and in a valid state (Open or Merged).
- If no PR is linked, inform the Developer.
- Do not proceed with testing until a valid PR is confirmed.

GitHub Tab — Linked PR Confirmed

Step 4: Test the Feature in the Application

Open TamilZorous Workspace in a browser. Test each acceptance criterion one by one. Note any step that does not behave as expected.

3 Test the Feature in the Application

Open the application and test against each acceptance criterion one by one.

1 Open the Application

Open the application in the test environment.

↓

2 Test Each Acceptance Criterion

Test the feature against each acceptance criterion one by one.

#	Acceptance Criteria	Status
1	Data should be migrated completely from ABT to Textile SAAS.	✔ Passed
2	Customer, Product, and Order data must be accurate after migration.	✔ Passed
3	No duplicate records should be created during migration.	✔ Passed
4	Migration errors should be logged and downloadable.	✔ Passed
5	Migration should be completed within the scheduled time window.	✔ Passed

↓

3 Record the Results

Mark pass/fail for each criterion and add any observations if applicable.

✔ Testing Completed

All acceptance criteria have been tested.

Results Summary

5 / 5 Passed

Observations

All data migrated successfully.
No issues found.

Key Information

- Test each acceptance criterion carefully.
- Ensure expected results match actual results.
- Log any issues and share with the Developer immediately.

Important

Do not proceed to the next step if any acceptance criterion fails. Log the issue and inform the Developer.

Testing Feature in the Application

Step 5: PASS — Set Status to Tested

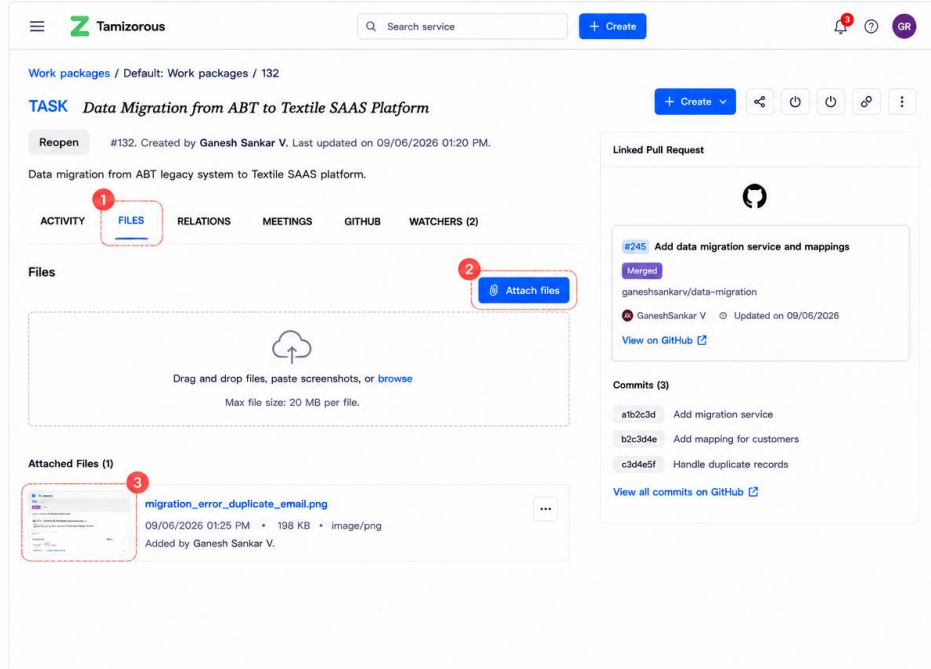

If all acceptance criteria pass, change the Status field to Tested. In the Activity tab, add a comment: QA PASS — tested on [today's date].

Step 7: Attach a Screenshot Under the Files Tab

Click the Files tab on the task. Upload a screenshot showing the failure. This gives the Developer a clear visual reference when fixing the issue.

7 Attach Screenshot Under Files Tab

Click the Files tab and attach a screenshot of the failure for the Developer.

1 Go to Files Tab

Click on the Files tab.

2 Attach Screenshot

Click **Attach files** and select the screenshot of the failure.

3 Screenshot Attached

The screenshot is now attached and visible under **Attached Files**.

Why Attach Screenshot?

Screenshots help the Developer quickly understand and reproduce the issue.

Result

Screenshot attached successfully under the Files tab.

Failure Screenshot Attached in Files Tab

Step 8: Log Time Spent in the Time Tab

Click the Time tab on the Work Package. Enter the number of hours spent testing this task and save the entry.

Note: Always attach a screenshot when setting status to Reopen. A written comment alone is not sufficient — visual evidence helps the Developer fix the issue faster.

ADMIN / LEAD

PR Governance & Definition of Done | Review, Merge, and Close Tasks

5. Admin / Lead — Review & Close

Purpose

The Team Lead or Admin reviews the code on GitHub once a task passes QA testing, merges the Pull Request, and closes the task in TamilZorous Workspace. This is the final step before a feature is considered complete.

Steps to Review, Merge, and Close a Task

Step 1: Filter Work Packages by Status = Tested

Open the Work Packages view. Click Filters and add Status = Tested. This shows all tasks that have passed QA and are ready for Lead review.

Step 2: Open the Task and Check the GitHub Tab

Click the task to open it. Click the GitHub tab to view the linked Pull Request and confirm its current status.

Step 3: Review the PR Code on GitHub

Click the PR link to open it on GitHub. Go to the Files Changed tab. Review the code for quality, security, and compliance with the architecture. Approve the PR or leave review comments if changes are needed.

Step 4: Merge the Pull Request on GitHub

After approving the PR, click Merge Pull Request on GitHub. Confirm the merge to combine the code into the main branch.

Note: Merging the PR on GitHub does not automatically close the task in the workspace. You must update the status manually in the next step.

Step 5: Set Task Status to Closed

Return to the task in TamilZorous Workspace. Click the Status field and select Closed. The task is now complete.

Step 6: Add a Comment in the Activity Tab

Click the Activity tab on the task. Add a comment: Merged PR #[number]. This creates an audit trail so anyone on the team can see when and which PR was merged.

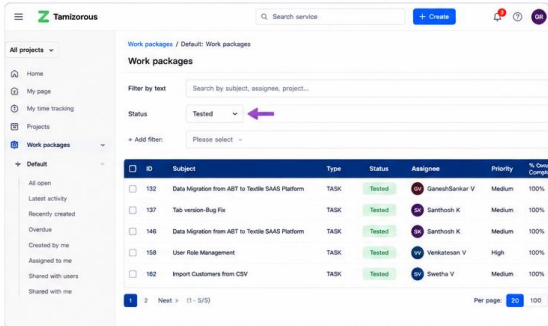

Step 7: Log Time Spent in the Time Tab

Click the Time tab on the Work Package. Enter the hours spent on reviewing, merging, and closing this task.

1

Filter by Status = Tested

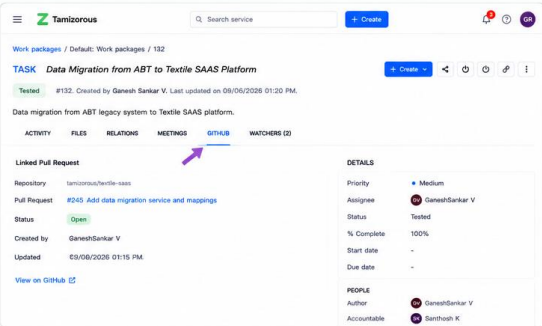

In Work Packages, filter by Status = Tested to see tasks ready for review.

2

Open Task and Check GitHub Tab

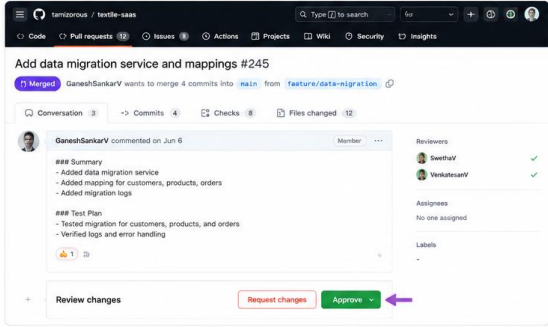

Open the task and click the GitHub tab to see the linked PR.

3

Review the PR on GitHub

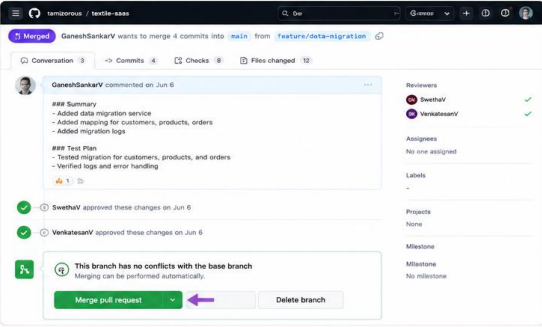

Click through to GitHub. Review the code changes and approve or request changes.

4

Merge the PR on GitHub

After approval, click Merge Pull Request on GitHub.

Work Package Time tab — Lead logs hours

Review & Closed

Note: Always log time and add the Merged PR comment before closing the task. This ensures full traceability from task creation to delivery.

ADMIN / LEAD

Document Management | Publishing and Viewing Documents

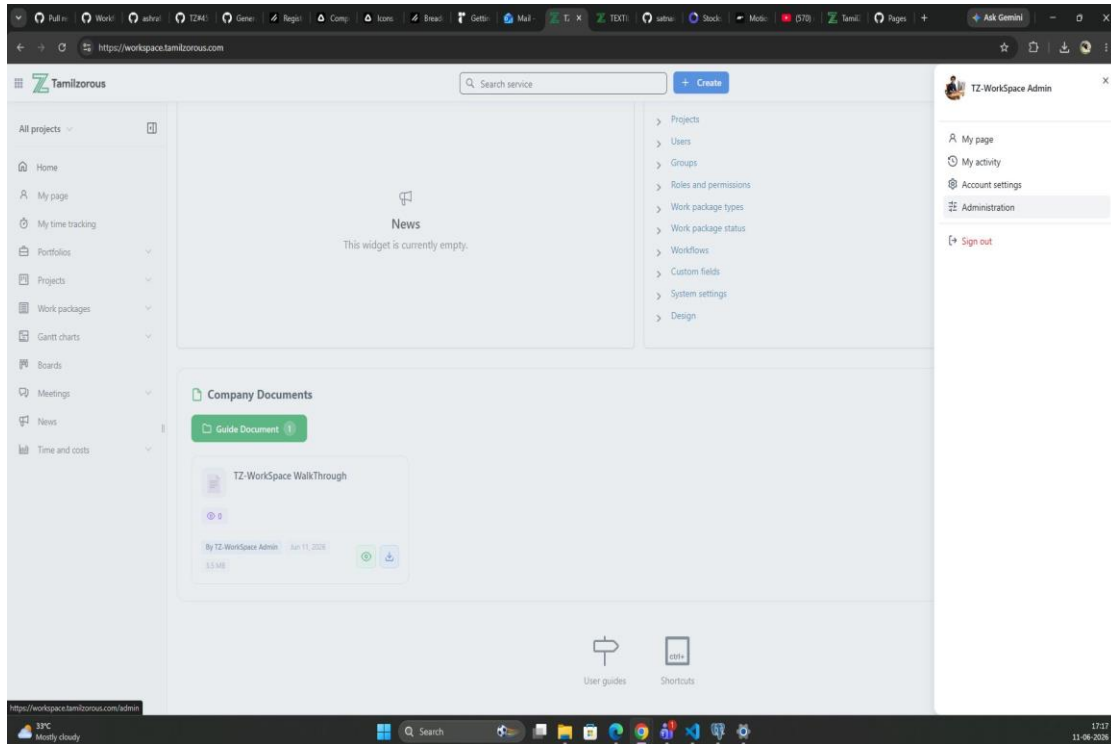

6. Admin / Lead — Document ManagementPurpose

The Admin uploads guide documents to TamilZorous Workspace so that all team members can view and download them from the Home screen. This section shows how an Admin publishes a document and how any user or Admin can find it on the Home screen.

Steps to Upload and View a Document

Step 1: Go to Administration

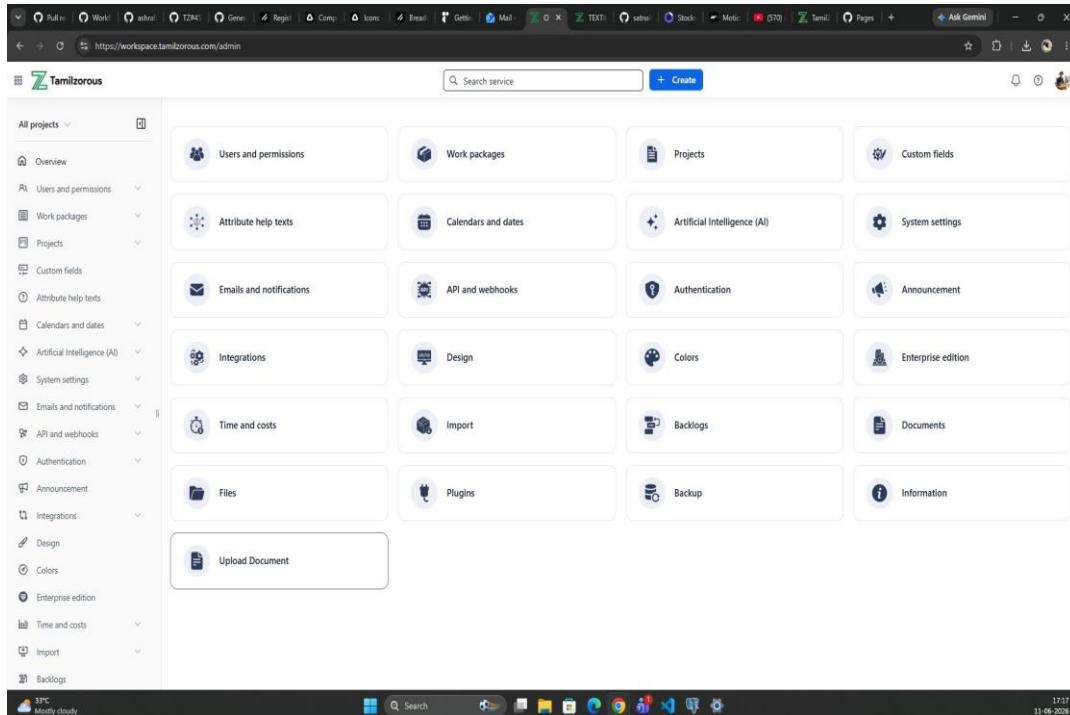

Click your profile avatar in the top-right corner of TamilZorous Workspace. A dropdown menu will appear. Click Administration to enter the admin panel.

Profile Menu — Click Administration

Step 2: Click Upload Document

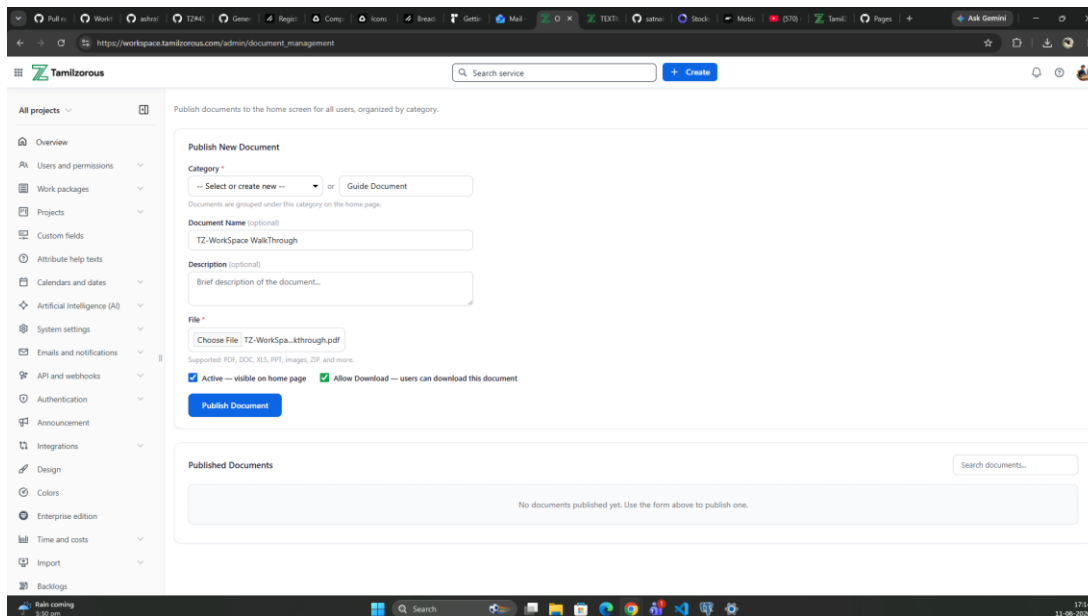

Inside the Administration panel, you will see a grid of all admin settings. Scroll to the bottom and click Upload Document to open the document publishing form.

Administration Panel — Upload Document Tile

Step 3: Fill in the Document Details and Publish

In the Publish New Document form, select or create a Category (e.g. Guide Document), enter the Document Name, add an optional Description, and choose the File to upload. Ensure both Active and Allow Download checkboxes are ticked, then click Publish Document.

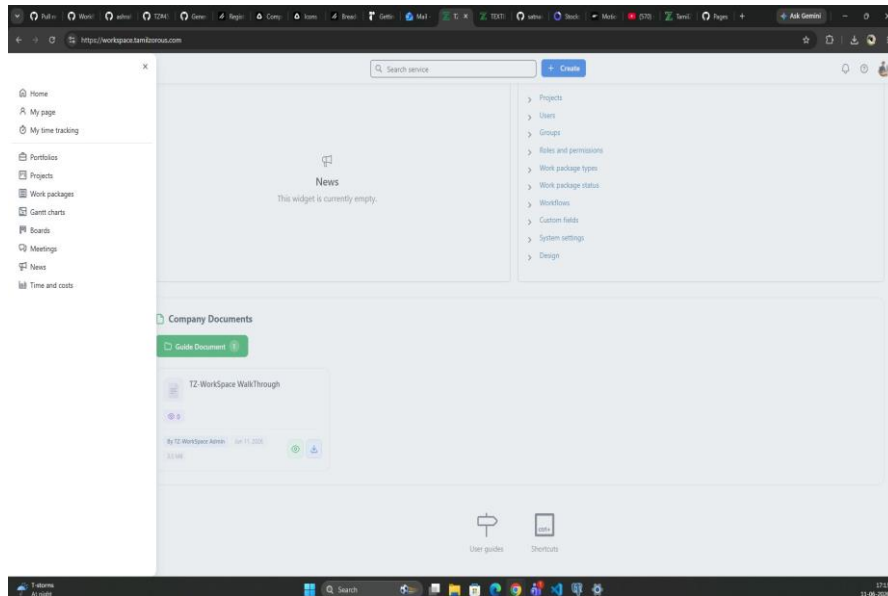

Publish New Document Form

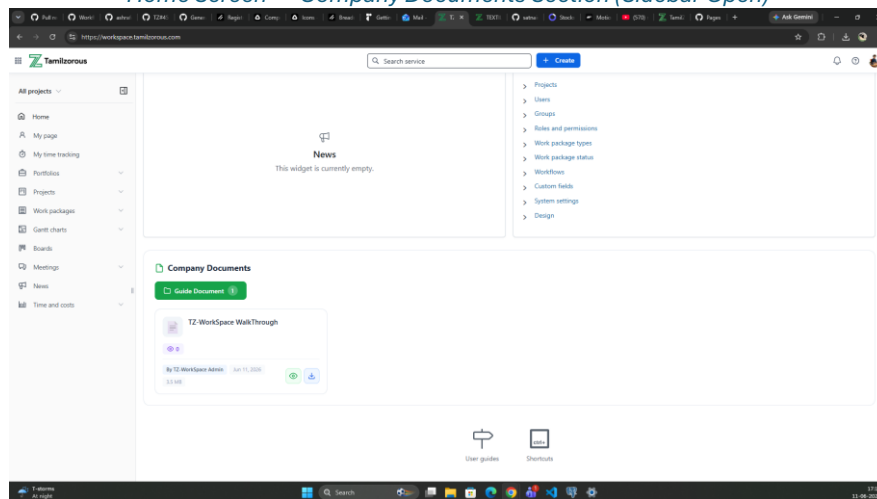

Note: Only users with Admin access can publish documents. Ensure Active is checked so the document appears on the Home screen for all team members.

Step 4: View the Published Document on the Home Screen

Once published, the document appears in the Company Documents section on the Home screen for all users and admins. It is listed under its category (e.g. Guide Document) and shows the document name, upload date, file size, and action buttons to view or download.

Home Screen — Company Documents Section (Sidebar Open)

Home Screen — Company Documents Section (Full View)

Note: All team members — including Developers, QA Engineers, and Admins — can view and download published documents from the Company Documents section on the Home screen. No additional permissions are required to view documents.
